

Igor V. Sherstov is a senior researcher with Institute of Laser Physics SB RAS, Novosibirsk, Russia, and lecturer with Novosibirsk State Technical University. He received his Diploma degree in physical engineering in 1981 from Novosibirsk Institute of Electrical Engineering and his PhD degree in optics in 2001 from Institute of Laser Physics SB RAS. His PhD thesis was “Monitoring of the atmosphere by TEA CO₂ laser radiation”. During 1993-1995 he took part in the installation and testing of mobile CO₂ DIAL system in KAIST, Taejon, Korea. His current research interest is in laser sensing of the atmosphere, including DIAL monitoring and photo-acoustic technology, research and development of new IR scientific devices for gas analysis. He is the author of over 50 scientific papers and patents.
